Practical - 05

Part 1: Shared Preferences

A. Create an app with a text field and button.

B. When the user types their name and clicks the button, save it using SharedPreferences.

C. When the app restarts, show a welcome message with the saved name.

D. Create a switch to toggle between ”Light” and ”Dark” themes (just change background colors).

E. Save the selection using SharedPreferences and apply it when the app opens again.

Part 2: App-Specific Storage

A. Create an app with two buttons: “Save Note” and “Read Note”.

B. Use **context.filesDir** to save a note written by the user to a file.

C. When clicking “Read Note”, display the contents in a TextView.

D. Let the user write a message and save it in the internal cache using **context.cacheDir**.

E. On restart, check if the cache file exists and show its contents.

Part 3: Room

A. Create a Room database with a single **Color** entity (`hex`, `name`).

B. Allow the user to enter a color and save it.

C. Show all saved colors in a **TextView** or **ListView**.

D. Extend the color app above to let the user enter a color name and delete it from the database using **DAO's @Delete**.

Part 4: Room + SharedPreferences Combined

A. Build a color-saving app (like above Question).

B. Use SharedPreferences to remember the last entered color name and auto-fill it next time the app is opened.
